

Indiana R&D 2011

Science & Engineering R&D Fuels U.S. Economic Growth & New Jobs

More than fifty years of experience shows that a strong federal commitment to scientific research is key to building a better America. **Discovery and innovation are proven fuels for economic growth and job creation.** And they are vital elements for achieving energy security and sustaining America's global leadership in science. We must begin to reduce the deficit and begin to live within our means. But we must be smart about how we go about it. **Federal support for science will spur economic growth and help restore a firm fiscal foundation for our nation.**

A National Science Foundation (NSF) study found that 73% of the science papers cited in industry patents were funded by taxpayers through the federal government, especially university research operations.¹

Indiana received \$393.1 million in federal prime award R&D contracts in FY 2010, with approximately 655 transactions taking place.² Information and charts on this page demonstrate the importance of federal investment in R&D to Indiana's economy, and its future in the global marketplace.
